Task List & Maintenance Plan Validation Report

Agent C · SAP PM Data Revitalization · Bokor
Generated: 02 October 2026 10:20

1.0 Introduction

The SAP Plant Maintenance (PM) Data Revitalization Project is a large-scale SAP PM/Enterprise Asset Management (EAM) data cleanup and remediation programme for asset-intensive, upstream operations. Agent C supports this programme by applying automated, Knowledge-Graph-based validation to Task List and Maintenance Plan master data, covering seven distinct data-quality checks (PP1-PP7) across naming conventions, Work Centre assignment, Task List redundancy, man-hour planning, maintenance strategy, and plan completeness.

1.1 Objectives

The objective of this report is to record the outcome of the automated Task List and Maintenance Plan data quality assessment for Bokor, covering PP1 through PP7, ensuring that naming, Work Centre, duplication, man-hour, strategy, and Maintenance Plan data are kept complete and correct.

1.2 Scope

This assessment covers 1,813 Task Lists, 8,025 operations, and 8,025 Maintenance Items for Bokor, as reflected in the Knowledge Graph at the time of this run. The assessment applies seven validation checks (PP1-PP7) described in Section 2.0.

2.0 Maintenance Master Data Quality Assessment

2.1 PP1 – Task List Naming

Validates whether each Task List Group's name reflects the platform and Equipment Class of its currently linked equipment.

Based on the assessment of 1,813 records: 1,813 (100%) (no finding).

Metric	Count	%
Total records assessed	1,813	100%
(no finding)	1,813	100%

2.2 PP2 – Work Centre

Classifies the required maintenance discipline for each operation and maps it to the approved Bokor Work Centre.

Based on the assessment of 8,025 records: 1,813 (23%) (no finding).

Metric	Count	%
Total records assessed	8,025	100%
(no finding)	1,813	23%

2.3 PP3 – Orphan Task List

Flags Task Lists with real operations but no current, non-stub Maintenance Item using them.

Based on the assessment of 1,813 records: 1,813 (100%) (no finding).

Metric	Count	%
Total records assessed	1,813	100%
(no finding)	1,813	100%

2.4 PP4 – Duplicate Task List

Flags candidate Task List pairs whose operation scope substantially overlaps or duplicates, for review only.

Based on the assessment of 1,813 records: 1,813 (100%) (no finding).

Metric	Count	%
Total records assessed	1,813	100%
(no finding)	1,813	100%

2.5 PP5 – Manhours

Validates recorded man-hours (WORK) against the PERSON x DURATION formula and comparable historical/JMS execution evidence.

Based on the assessment of 1,813 records: 1,810 (100%) CANNOT_VERIFY; 3 (0%) REVIEW_REQUIRED.

Metric	Count	%
Total records assessed	1,813	100%
CANNOT_VERIFY	1,810	100%
REVIEW_REQUIRED	3	0%

2.6 PP6 – Strategy / Frequency

Validates Maintenance Strategy and Frequency consistency between a Task List and its linked Maintenance Items/Equipment.

Based on the assessment of 8,025 records: 8,025 (100%) (no finding).

Metric	Count	%
Total records assessed	8,025	100%
(no finding)	8,025	100%

2.7 PP7 – Hanging Maintenance Item

Flags Maintenance Items with no Maintenance Plan assigned (a 'hanging' item).

Based on the assessment of 8,025 records: 8,025 (100%) (no finding).

Metric	Count	%
Total records assessed	8,025	100%
(no finding)	8,025	100%

3.0 Conclusion & Way Forward

1. Man-hour validation (PP5) for 1,810 operation(s) could not be completed due to insufficient comparable historical execution and JMS reference data; it is recommended that additional historical Work Order detail be made available to close this evidence gap in a future assessment cycle.

2. Agent C's full findings and suggested values for all seven pain points are provided in the accompanying Recommendations and Findings Summary workbooks (Appendix).

Appendix: Supporting Data

The detailed, record-level findings and suggested values for all seven pain points are provided in: SAP_PM_Agent_Recommendations.xlsx and SAP_PM_Agent_Findings_Summary.xlsx (output directory).
